

2-port valves
VVP47..(S)

3-port valves
VXP47..

3-port valves with bypass
VMP47..(S)

Acvatix™

2-port and 3-port terminal unit valves PN16

VVP47..(S)
VXP47..
VMP47..(S)

- Bronze valve body CC491K (Rg5)
- DN 10, DN 15 and DN 20
- k_{vs} 0.25 to 4 m³/h
- Linear characteristic
- Flat seal male threaded connections G..B to ISO 228-1
- V..P47..S valves: Male threaded connections for use with Conex compression fittings for copper pipes
- Manual adjuster
- Can be combined with SSP.. / SFP.. electromotoric actuators or STP..3.. electrothermal actuators

Use

- For use in ventilation and air conditioning systems for water-side terminal unit control in closed circuits, e.g. for induction units, fan coil units, small re-heaters and small re-coolers.
 - 2-pipe systems with 1 heat exchanger for heating and cooling
 - 4-pipe systems with 2 separate heat exchangers for heating and cooling
- In closed-circuit zone heating systems, e.g. for:
 - Separate floors in a building
 - Apartments and individual rooms
- The VXP47..S 3-port valves together with SFP.. actuators are specially suited for changeover applications where small leakage rates are required.

Type summary

¹⁾ Flat seal male threaded connections

²⁾ Male threaded connections for use with Conex compression fittings

³⁾ Applies only to 3-port version

k_{vs} = nominal flow rate of cold water (5...30 °C) through the fully opened valve (H₁₀₀) at a differential pressure of 100 kPa (1 bar)

Accessories

Prod. No.	Stock no.	Description
ALG..2	ALG..2	Set of 2 fittings with threaded connections for 2-port valves or 3-port valves with bypass, consisting of: 2 union nuts, 2 discs and 2 flat seals ALG..3B are brass fittings, for media temperatures up to 100 °C.
ALG..2B	S55846-Z1..	
ALG..3	ALG..3	Set of 3 fittings with threaded connections for 3-port valves, consisting of: 3 union nuts, 3 discs and 3 flat seals ALG..3B are brass fittings, for media temperatures up to 100 °C.
ALG..3B	S55846-Z1..	

Ordering

Please give valve and the required ALG.. threaded fittings. The ALG.. threaded fittings and the SSP.., SFP.. and STP..3.. actuators must be ordered as separate items.

Example:

Product number	Stock number	Description	Quantity
VXP47.10.1	VXP47.10.1	3-port Terminal Unit Valve PN16	4
ALG133	ALG133	Threaded Fittings	4

For 3-port valves with bypass VMP47.. order two sets of ALG..2 or ALG..2B threaded fittings.

Delivery

Valves, actuators and fittings are packed and supplied separately.

Data sheet	N4864		N4865		N4884		N4884			

¹⁾ After a power failure or switching off the operating voltage the control path A → AB of the valve opens.

Δp_{max} = maximum permissible differential pressure across the control path of the valve valid for the entire actuating range of the motorized valve

Δp_s = maximum permissible differential pressure (close of pressure) at which the motorized valve will close securely against the pressure

Overview of actuators

Actuator	Type of actuator	Operating voltage	Positioning signal	Positioning time	Positioning force
SSP31..	Electromotoric	AC 230 V	3-position	150 s	160 N
SSP81..		AC 24 V		43 s	
SSP81.04		AC / DC 24 V		DC 0...10 V	
SSP61..		AC 230 V	2-position	10 s	135 N
SFP21/18		AC 24 V			
SFP81/18	Electrothermal	AC 230 V	2-position	180 s	100 N
STP23..		AC / DC 24 V	2-position / PDM ¹⁾		
STP73..		AC 24 V	DC 0...10 V		
STP73PR/00 ³⁾					
STS63..					

¹⁾ PDM = Pulse-Duration-Modulation

²⁾ Cold start 270 s

³⁾ Variant for PDM and parallel flow

Sizing

Example:

- 1 $\dot{V}_{100} = 0.083$ l/s
- 2 $\Delta p_{V100} = 9$ kPa
- 3 Required k_{vs} -value = 1.0 m³/h

Δp_{V100} = differential pressure across the fully open valve and control path A → AB by a volume flow \dot{V}_{100}
 \dot{V}_{100} = volume flow through the fully open valve (H_{100})
 Δp_{max} = maximum permissible differential pressure across the valve's control path, valid for the entire actuating range of the motorized valve
 100 kPa = 1 bar ≈ 10 mWC
 1 m³/h = 0.278 l/s water at 20 °C

Valve characteristics

With valve types VXP47../VMP47...(S), the k_{vs} values in bypass B represent only 70 % of the k_{vs} value in the straight-through control path, A → AB. This compensates for the flow resistance of the heat exchanger or radiator, so keeping the overall flow rate, \dot{V}_{100} as constant as possible.

- Combined disc / plug flow restrictor
- Seat ring embedded in through-port A → AB
- Seat machined into bypass B → AB.
- Continuously lubricated sealing rings
- Conical return springs, for more compact valve construction

Engineering notes

Also refer to "Mounting notes" and "Commissioning", page 5.

The 2-port valves should preferably be installed in the return, where the stem seal will be exposed to lower temperatures.

Recommendation: A strainer should be fitted upstream of the valve. This increases reliability.

Valve construction	Valve series	Valve flow in control mode			Valve stem	
		Inlet A	Inlet B	Outlet AB	Retracted	Extended
2-port valves 	VVP47..(S) 	variable		variable	A → AB opens	A → AB closes
3-port valves 	VXP47.. 	variable	variable	constant	A → AB opens B → AB closes	A → AB closes B → AB opens
3-port valves with bypass 	VMP47.. (S) 	variable	variable	constant	A → AB opens B → AB closes	A → AB closes B → AB opens

Warning

The direction of flow **MUST** be as indicated by the arrow, i.e. only from A → AB and B → AB.
The 3-port valve types VXP47.. and VMP47..(S) may only be used in mixing applications.

Mounting notes

Orientation

The specified direction of flow must be observed in all cases, also refer to "Engineering notes", page 4.

The valves are delivered in single packs; Mounting Instructions 74 319 0301 0 are enclosed with the packaging.

The valve and actuator can be easily assembled on site. There is no need for special tools or calibration.

AL50 supporting ring

The AL50 supporting ring ¹⁾ must be put into position before mounting the actuator SFP.. onto the valve. Only the equipment combination V..P47.. and SFP.. requires supporting ring AL50.

¹⁾ Included in delivery of the SFP.. actuator

Commissioning

Commission the valve only if the manual knob or actuator have been mounted correctly.

Manual adjustment

The straight-through control path A → AB can be opened either electrically via the actuator, or by adjustment with the manual button. In the case of 3-port valves, this throttles or closes bypass B.

Maintenance

Warning

V..P47..(S) valves require no maintenance.

When doing service work on the valve / actuator:

- Deactivate the pump and turn off the power supply
- Close the shutoff valves
- Fully reduce the pressure in the piping system and allow pipes to completely cool down

If necessary, disconnect the electrical wires.

Before putting the valve into operation again, make certain the manual knob or the actuator is correctly fitted.

Stem sealing gland

The stem sealing gland cannot be exchanged. In the case of leakage, the entire valve must be replaced. Contact your local office or branch.

Disposal

The valve must be dismantled and separated into its various constituent materials before disposal.

Legislation may demand special handling of certain components, or it may be sensible from an ecological point of view.

Current local legislation must be observed.

Warranty

The technical data supplied for these valves is valid only for valves used in conjunction with the actuators listed under "Equipment combinations", page 2.

Use with third-party actuators invalidates any warranty offered by Siemens Switzerland Ltd / HVAC Products.

Technical data

Operating data	PN class	PN 16 to EN 1333
	Permissible operating pressure	1600 kPa (16 bar)
	Valve characteristic	
	Path A → AB	linear
	Bypass B → AB	linear
	Leakage rate	to DIN EN 1349
	Path A → AB	0...0.05 % of k_{VS} value
	Bypass B → AB	0...0.05 % of k_{VS} value
	Permissible media	chilled water, low-temperature hot water and water with frost protection additives recommendation: water should be treated as specified in VDI 2035
	Temperature of medium	1...110 °C, or max. 120 °C for short periods ¹⁾

¹⁾ ALG..B fittings for media temperatures up to 100 °C

S_V = rangeability k_{VS} / k_{VF}

k_{VS} = nominal flow rate of chilled water (5...30 °C) through the fully opened valve (H_{100}) at a differential pressure of 100kPa (1bar).

k_{VF} = the lowest value for k_V at which the flow characteristic tolerance is still maintained, at a differential pressure of 100kPa (1 bar)
